¹ Adapted from my book <u>CORIJAREA LIMBAJULUI METODĂ PRACTICĂ</u>, written during my time as an S-LP in Romania.

² <u>Logatome</u> (nonsense syllable): A term I use to describe a phonetic unit that combines sounds to create a syllable or word-like structure. Logatomes are often utilized in linguistic research and speech therapy to evaluate phonetic skills without the influence of actual word meanings, while also preserving the prosodic structure.

³ Cognate pairs: Consonant sounds that are produced in the same way but differ in voicing, such as /b/ (voiced) and /p/ (voiceless).
